SPECIAL ISSUE

ANNUAL BUYING GUIDE

Ravenscroft

Winter 2003

Ravenscroft's line of "amplifier" glasses, made from lead-free crystal are designed, appropriately enough, to amplify the aromas in a glass of wine. An appealing collection from a design point of view, they're also reasonably priced. Of course, always choose your tools wisely. While Ravenscroft's glasses will highlight a wine's virtues, they also point up its flaws - so if you're drinking plonk, better to stick to your standard-issue glassware. But since you're sitting there right now with a copy of W&S in your hands, we have to ask: Why on earth would you be drinking plonk?
